PROFESSIONAL SUMMARY

Flutter Developer with 3.5+ years of experience building cross-platform mobile and web applications with Flutter/Dart, state management, REST APIs, Firebase, and modular architecture. Full-stack project experience with Node.js, Express.js, TypeScript, and MongoDB across fintech, accounting, e-commerce, ride booking, security tooling, and game development.

TECHNICAL SKILLS

Flutter & UI: Flutter, Dart, Android, iOS, Flutter Web, Material 3, responsive/adaptive UI, reusable widgets, animations, plugin integration
State & Architecture: Riverpod, Provider, GetX, BLoC (basic), MVVM, Clean Architecture, Repository Pattern, MVC, SOLID, modular feature architecture
Languages: Dart, TypeScript, JavaScript, C, object-oriented and asynchronous programming, null safety
Backend & APIs: Node.js, Express.js, REST APIs, JSON, Dio, MongoDB/Mongoose, JWT, role-based access control, WebSockets, Socket.IO
Firebase & Storage: Firebase Authentication, Firestore, Realtime Database, Firebase Storage, FCM, SQLite, Hive, SharedPreferences
Integrations & Security: Stripe, Razorpay, Cloudinary, Google Maps, Firebase services, local authentication/biometrics, secure storage, platform channels, cryptographic utilities, AWS SES
Testing & Quality: Unit, widget and integration testing; debugging, Postman, performance profiling, error handling, code reviews
Tools & Delivery: Git, GitHub, Android Studio, VS Code, Gradle, Figma, GitHub Actions, Docker

PROFESSIONAL EXPERIENCE

Flutter Developer | Mobile App Developer

Interland Technologies Service Pvt Ltd | Kochi, Kerala | Apr 2023 – Present

- Develop and maintain 10+ cross-platform Flutter applications for Android, iOS, and Flutter Web using Dart.
- Build responsive, reusable UI components using Riverpod/Provider and modular patterns, including MVVM/Clean Architecture where appropriate.
- Translate Figma/product requirements into maintainable interfaces and collaborate with design, backend, QA, and product teams.
- Integrate REST APIs, Firebase, authentication, notifications, payments, local storage, and third-party SDKs across fintech, accounting, commerce, and other workflows.
- Troubleshoot UI/API/device issues, improve stability and performance, and maintain unit, widget, and integration tests; achieved 95%+ core-module test coverage on a major application.
- Contribute to backend/API integration using Node.js, Express.js, TypeScript, and MongoDB; participate in Git-based reviews and CI/CD/release troubleshooting.

Flutter Developer Intern

KingoLabs Innovations Pvt Ltd | Kochi, Kerala | Jan 2023 – Mar 2023

- Developed Flutter interfaces with responsive layouts, reusable widgets, REST API integration, custom UI components, and CustomPainter-based screens.
- Contributed to an internal CRM and 3+ cross-platform app projects; debugged device-specific layout, navigation, and integration issues.

SELECTED PROJECTS

Ironclad SDK — Modular Flutter/Dart Security SDK

Tech: Dart | Flutter plugin architecture | modular packages | platform channels | security and cryptographic utilities

- Built a modular Flutter/Dart security SDK ecosystem covering RASP and device-integrity checks (root/jailbreak, debugger/hook, emulator and ADB signals), attestation, tamper-evident audit, biometrics/session controls, encrypted storage, envelope encryption, MPC/Shamir sharing, PQC/ZKP utilities, certificate pinning, SIM/carrier signals, screen/clipboard/input safeguards, telemetry redaction, policy, AI guardrails, offline sync, and forensics helpers.
- Published the core ironclad package on pub.dev (v0.0.3); developed a companion package ecosystem spanning runtime integrity, identity, cryptography, network protection, privacy, telemetry, compliance, and incident response.

Ironclad SDK — Full Example Implementation / Demo Dashboard

Tech: Flutter | Dart | Riverpod | Ironclad core and modular packages (local path dependencies)

- Built the companion Flutter example app with local path dependencies on Ironclad core/modules and an interactive dashboard of feature cards, action tiles, dialogs, controls, and security-status/trust-score views to exercise package APIs.
- Implemented interactive examples across security checks, storage, audit, networking, identity, and threat-monitoring modules, with platform-aware flows and fallback behavior where native capabilities differ.

GrowK — Digital Gold, Savings & Fintech App

Tech: Flutter | Dart | Riverpod | HTTP | Firebase Messaging | local notifications | local_auth | SIM/device packages

- Implemented feature flows for login/profile, savings goals, gold price trends and buy/sell journeys, wallet/transactions, bank details, nominee and recurring-savings journeys, KYC, referrals/rewards, notifications, and settings.
- Built app flows for OAuth2 token refresh, bank OTP, Nafath/KYC, biometric authentication, push notifications, and device/SIM checks; provider-backed behavior depends on the configured integration.

SELECTED PROJECTS (CONTINUED)

Payzo Books — Accounting & Business Management App

Tech: Flutter | Riverpod | HTTP/Dio | WebSocket channel | Firebase Messaging | charts | Excel/file handling

- Supports invoices/recurring invoices, bills, expenses, quotations, purchase orders, customers, vendors, products, taxes/VAT, payments, approvals, and business dashboards.
- Implemented reusable Riverpod/repository/API workflows with validation, pagination and search; added Excel import/export, PDF/document download and sharing, notifications, connectivity handling, charts, and Android file-download integration via MethodChannel.

Flutter Multi-Vendor E-Commerce Platform

Tech: Flutter customer/vendor/admin apps | Riverpod/Provider | Node.js | Express | MongoDB/Mongoose | Firebase Auth/FCM | Stripe | Cloudinary | AWS SES

- Built three Flutter clients (customer, vendor, and admin/web) with a Node.js/Express/Mongoose backend; covered product discovery, cart/checkout, addresses, orders, reviews, wishlist, vendor inventory/orders/earnings, and admin management.
- Integrated REST API workflows with JWT/RBAC, Stripe payment and webhook flows, Cloudinary media handling, AWS SES email, and Firebase notifications.

AutoRide — Auto-Rickshaw Ride Booking System

Tech: Flutter passenger/driver/admin apps | Provider | Firebase Auth/Realtime Database/Storage | FCM | maps/location | Express | Razorpay

- Built passenger, driver, and admin Flutter apps with ride request/status/history flows, driver profiles, map/route and location features, real-time trip updates, notifications, and admin/reporting screens.
- Included a separate Express/Razorpay payment backend and QR/payment flows; driver-document upload, driver discovery, and report-export features remain areas for further completion.

SkyHopper — 2D Arcade Game

Tech: Flutter | Flame | Riverpod | Flame Audio | SharedPreferences | Google Mobile Ads

- Built a Flutter/Flame game loop with player/obstacle components, collision handling, coins and energy collectibles, backgrounds and ambient effects, and menu, gameplay, pause, game-over, and settings screens.
- Added Flame Audio and local settings/progression persistence; investigated lifecycle, rendering, frame-time, and audio behavior. Ad integration exists in source, but live ad serving/store release were not verified.

EZ Bank — Banking & Wealth UI Prototype

Tech: Flutter | Dart | Riverpod | GoRouter | Dio | flutter_secure_storage | separate React Native/TypeScript codebase

- Developed feature-first Flutter flows for authentication, dashboard/theme switching, transaction history, transfers, wallet, gold/precious metals, and recurring-investment journeys using Riverpod, GoRouter, Dio, and secure-storage dependencies.
- Repository also includes a separate React Native/TypeScript codebase. Banking and investment data/operations are partly simulated; present this as a UI/workflow prototype, not a live banking integration.

SIMT UPI — Bilingual Payments Prototype

Tech: Flutter | English/Arabic localization | responsive UI | shared_preferences | audio/haptics | QR scanning flows

- Created bilingual English/Arabic payment journeys for onboarding, mobile/SIM verification, passcode setup, bank discovery/linking, UPI PIN, QR scanning, transfers, transaction status/history, merchant onboarding/dashboard, utilities, and rewards.
- Authentication and merchant/backend services are simulated, with no live EBS switch connection; position it as a payments prototype rather than a production UPI network.

EDUCATION

B.Tech — Computer Science and Engineering
Malabar Institute of Technology, Kannur | Jun 2015 – Jun 2019

CERTIFICATIONS & ADDITIONAL

- Udemy — Flutter Multi-Vendor E-commerce | Shop | Food | Store App | Node.js | Express | MongoDB | Deployment
- Flutter Development Certification — Spectrum Softech & Avodha Institute (2023)
- Immediate Joiner | Figma-based UI implementation | Git-based collaborative development
